Experience

Google, Software Engineer
Mar. 2021–Mar. 2024, Mountain View, CA

- Wrote internal Java library using Android SDK for inter-process and cross-product Lens image query service
- Trained, evaluated multi-headed MobileNet image classifier for deployment on Android with TFLite
- Profiled system health impact and optimized feature memory consumption for launch approval
- Wrote feature's C++ unit, browser, and model validation tests in open-source Chromium code base

Dell EMC, Software Engineer
Jul. 2019–Jul. 2020, Santa Clara, CA

- Triaged and fixed customer-reported bugs on proprietary UNIX-based CLI
- Wrote low-level unit tests and implemented code coverage tracking routine for regression detection

Proofpoint, Software Engineering Intern
Jun. 2018–Aug. 2018, Sunnyvale, CA

- Wrote and deployed Python CLI tool to poll real-time data and detect anomalies for improved incident response time
- Developed cloud micro-service to configure and transmit specified internal events between data centers

Projects

LuminAI [link to homepage]
Aug. 2025–Dec. 2025, Remote

- Developed motion visualization feature for Unity project currently exhibiting at Hartsfield-Jackson Atlanta Intl. Airport

Doom Mons Directive [link to trailer]
May 2025–July 2025

- Developed 3D extraterrestrial survival simulator in team of 6 for graduate Video Game Design course using Unity and C#

Education

Georgia Institute of Technology
Aug. 2024–Present, Remote
MS in Computer Science

Coursework
Computer Graphics
Computer Vision
Computational Photography
Video Game Design

San José State University
Aug. 2015–May 2019, San Jose, CA
BS in Computer Science,
Music minor

Skills

Programming
Java, Python, C++, C

Tools and Frameworks
Bash, Git, Perforce, TensorFlow, PyTorch, OpenCV, Unity, Blender
